

DUTY ALLOCATION AND DRIVER MANAGEMENT

DAS

Trapeze's Duty Allocation System (DAS) enables bus and coach companies to manage operations safely and legally, and with optimal resource.

Working alongside your schedules, DAS provides a simple user interface to plan ahead and then record actual events as they occur during the operational day. Holidays and rest days are effortlessly accommodated; the system automatically taking account of the vehicles and routes each driver is able to operate, as well as their current working schedule, working time directives, and working hours to ensure legal compliance.

Of course, sickness and schedule changes mean manual intervention is a daily occurrence, which is where DAS comes into its own; seamlessly offering costed options for covering work. With DAS, not only will you remove a serious business headache; you can ensure compliance with legislation, and optimise work allocation to significantly reduce labour costs.

“DAS removes a serious business headache; ensures compliance with working time directives; and helps optimise work allocation in order to significantly reduce labour costs”

Key Benefits

For the Business

- Total efficiency to minimise driver pay
- Effortlessly manage any payroll rule
- Measurable return on investment
- Transparent reporting

For Allocators

- Clear visibility of the allocation requirements
- Simplified allocation processes
- Ensure legal compliance
- Failsafes for uncovered work

For Drivers

- Transparency of available work
- Ensures regulatory compliance
- Fair distribution of holiday & overtime
- Self-service portal – any time, anywhere

THE DAS FAMILY

Duty Allocation & Driver Payment (DAS)

Completely optimise duty allocation and ensure drivers are paid accurately

Fatigue Manager

Use all available data to ensure drivers are fit to drive safely

Yard Manager

Take DAS into the yard to streamline vehicle roll-out and allocation

Driver Self-Service (OnBoard)

Reduce traffic office and admin workload, and improve driver retention

Mobile Sign-On (OnBoard)

Mobilise operations by enabling drivers to sign on for work remotely

Automatic Allocation (Auto Allocation)

Reduce costs and support forward allocators with automatic bulk processing

Management Reporting (DASH!)

Managers can review all operational KPIs wherever they are, whenever required
