

While the core Fleetmaster system can streamline workshop operations and reduce associated costs, its effectiveness is multiplied when allied with the Technician's Tablet, which enables technicians to receive job details and enter work details — all without leaving the workshop.

#### Go Mohile

With the Technician's Touchscreen, staff can access Fleetmaster wherever they need. Workshop employees can complete inspection sheets electronically, and drivers can even be assigned work — and then enter the results — from remote locations.

#### **Any Device**

Because the Technician's Tablet is browser-based, it is not limited to any particular device, so it can be used with any Tablet PC or Smartphone.

## Technician's Tablet: Key Benefits

- · Improved in-workshop efficiency and productivity
- Streamlined data entry for increased accuracy
- Eradicate data re-entry errors
- Accurate KPI reporting at any time
- Improve workflow forecasting
- Usable on any tablet PC or Smartphone

"The Technician's Tablet maximises technician efficiency; improves data accuracy; and provides managers greater visibility of operational performance."

#### FLEETMASTER: TECHNICIAN'S TABLET

#### Maximise technician effectiveness

Your technicians are a valuable — and expensive — resource. So why waste their time collecting and processing job cards and ordering or waiting for parts? With Fleetmaster: Technician's Tablet, job details are digitally transmitted wherever the technician needs them, and simply entered via the tablet's touchscreen.

#### Reduce costly data entry errors

The Technician's Tablet enables technicians to enter job details directly from the shop floor — which removes the possibility that admin staff will re-enter information incorrectly, resulting in costly mistakes. And of course, because your admin team are no longer re-entering job card data, their time can be used to focus on activities that really benefit the organisation — like reducing cost, or processing reveue-generating work.

#### **Instant reports**

Do you wish you could report more effectively, but are prevented because the information you need sits on job cards in filing cabinets? With the Technician's Tablet, job details are recorded digitally, ready for immediate analysis. Furthermore, the Fleetmaster dashboard offers clear, easy to understand graphs and pie chats specifically designed for at-a-glance visibility of the workshop's current operation.

#### Earn revenue-generating work

The combination of real-time operation levels and improved data accuracy means you have far greater control over, and confidence in, your forecasting. Some Fleetmaster clients are now expanding operations by using this information to identify spaces where they can take on revenue-generating work.

# Build a happier, more productive team

Nobody enjoys working unproductively. Are your technicians frustrated that they spend too much time on administration? Do your admin team spend their days re-entering job card data or searching for old job cards? And do your management team struggle to monitor KPIs and forecast accurately because they don't have the data they need? The Technician's Tablet solves all these issues, ensuring your workshop team are happier and more productive in their working lives.

### TRAPEZE GROUP: Technology rides with us

Trapeze Group supplies reliable, scalable and innovative solutions for the rail and road transport sector. Hundreds of private and public organisations in Europe, North America and Asia-Pacific have selected software solutions from the Trapeze Group in order to improve and broaden the efficiency, quality and scope of their transport solutions, thus enabling them to provide their customers with even more services in a more reliable and cost-effective manner.
